

ASP SiteWare Security fix for the following products:

AutoDealer V.1

AutoDealer V.2

This fix is for product purchases prior to April 1, 2007.

autoDealer is vulnerable to SQL injection. A remote attacker could send specially-crafted SQL statements to the detail.asp script using the iPro parameter, which could allow the attacker to view, add, modify or delete information in the back-end database.

To correct this problem change the code in the inc_detail.asp file as follows:

On or about Line 29 where it may read:

```
Dim rsDetail__MMColParam
rsDetail__MMColParam = "0"
if (Request.QueryString("iPro") <> "") then rsDetail__MMColParam =
Request.QueryString("iPro")
```

Change the entire section to:

```
Dim rsDetail__MMColParam
rsDetail__MMColParam = "0"
if (Request.QueryString("iPro") <> "") then rsDetail__MMColParam =
Request.QueryString("iPro")
if not isnumeric(rsDetail__MMColParam) then
    rsDetail__MMColParam = -100
end if
```
